

# Technology that runs your farm.

Cannot be in your farm every day?

You don't need to be.

When technology can run your farm,  
for you, the way you would.

# Three Challenges That Every Farmer Faces.

## Labour is Scarce

Labour availability is seasonal and shrinking. Youngsters prefer gig economy jobs in cities making farm labour costlier every year.

## Errors are Silent

A missed irrigation cycle, an unchecked pH shift - by the time it shows up in the crop, the damage is done.

## Absence is Costly

Most farm owners cannot be on site daily. Without the right systems, being away means being exposed.

# Don't Buy Products. Buy Solutions.

## CG Seed

Monitoring.

If you are hands-on and on-site, every day.

## CG Pro

Monitoring + Automation.

If you supervise remotely with weekly visits.

## CG Max

Monitoring + Automation + Intelligence.

If farming is not the only business you run.

All three solutions include electric control panel, multiple sensors, and proprietary technology configured to your farm.

# CG Seed.

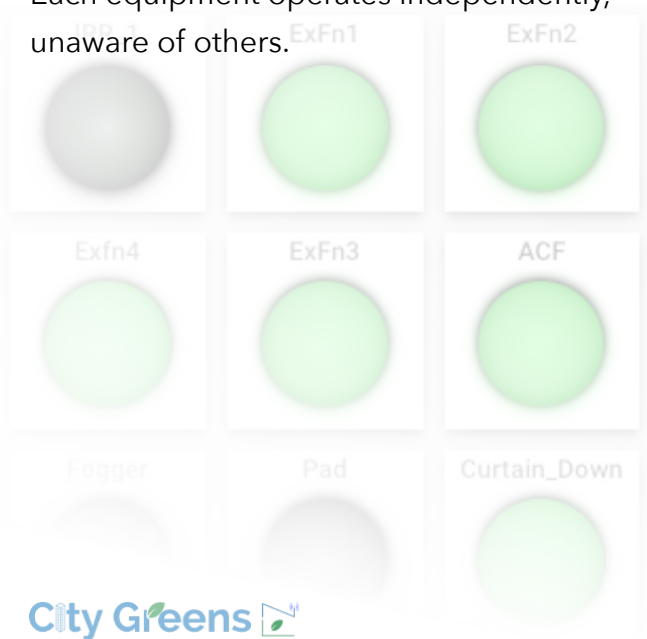

## Know what is happening.

Technology monitors key parameters.

You run the farm.

Static. Timer based.

Each equipment operates independently,  
unaware of others.

# CG Pro.

## Control what is happening.

You define the rules.

Technology runs the farm.

Dynamic. Smart. Sensor based.

Each sub-system (e.g. climate, irrigation, etc) thinks and acts as a team.

2026-05-02 12:15:00

Temperature Outside: 42 °C

Temperature Inside : 29.9 °C

# CG Max.

## Act before it happens.

Technology runs your farm.

AI monitors, detects, and flags risks.

Dynamic. Intelligent. AI based.

One central intelligence. All sub-systems act in sync with each other.

# Made in India. Recognised World Over.

Imported systems are designed for stable power, reliable infrastructure & connectivity. Indian farms have none of that.

CityGreens solution is proprietary, multi-award winning, and built ground-up for Indian conditions.

Awarded/Supported by:

# Why Farm-Entrepreneurs Choose CityGreens.

India's most awarded agri-tech startup  
in controlled environment agriculture\*

*\*as covered by The Financial Express*

5+ Patents

23+ Awards

36+ IPs

100 L+ Govt. Grants

Winner  
Agritech Startup Grand Challenge  
Startup Mahakumbh 2025

# Technology is not a cost. It is your highest-return investment.

An investment that pays for itself -  
through lower costs, reduced labour,  
higher yields, and fewer crop losses.

Price ranges from 10L+ to 20L+ for 1 Farm.
